

MANAGED MEDICAL EQUIPMENT STORAGE

WHAT IS AVENSYS MANAGED STORAGE?

We provide a climate controlled storage facility with on-site EBME facilities in which you can store your unused medical equipment and be confident that it is maintained to the highest standards.

From single items to entire wards, simply contact us and we will collect the equipment from your site. As the UK's only Bio-Medical Engineering company that operates a storage and distribution network, we are able to remove equipment from in-service locations and return them to the same patient ready status when required. While in storage with us, your medical devices will be stored in a climate controlled facility where our team of engineers ensure devices are kept in perfect working order.

When you need your equipment back at your site, simply contact us and we will have it back on your site within 48 hours, installed and patient ready.

FLEXIBILITY

For devices that require a 'storage only' service we can collect and store your medical devices for as long as required and return when needed. However, our on-site EBME facility enables us to undertake scheduled servicing to ensure that all stored devices remain in perfect working order. Battery function, mechanical joints, oil levels, software and digital displays are all checked to ensure equipment is ready at a moments notice.

Items under a service contract with a manufacturer can also be stored with us. When equipment requires servicing, we will move the required devices to our on-site EBME workshop to which access will be given to the servicing engineer.

Operating to agreed KPIs, ensures that devices in storage with us are managed to an agreed schedule, and when recalled to service are delivered within an agreed time frame.

KEY BENEFITS

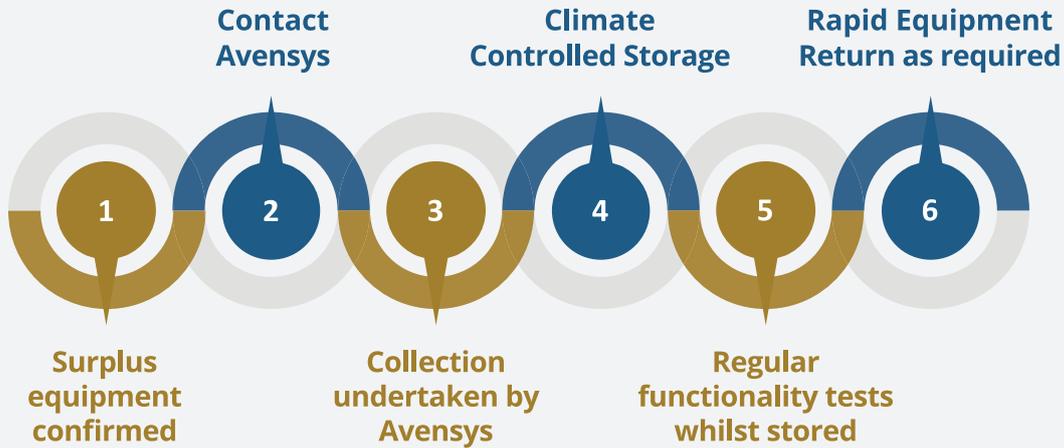

-  **OPTIMUM CONDITIONS**
Mechanical and electrical components can be damaged if stored in incorrect climates. Avensys' storage environment is temperature and humidity controlled, ensuring no equipment is climate damaged during storage.
-  **FUNCTIONAL CHECKS**
Expert engineers based at the storage facility perform periodic functional checks to ensure your equipment is always ready in case of recall.
-  **FREE UP SPACE**
Moving unused equipment not only clears space in your hospital, but removes a standing liability from your facility.
-  **ANY NUMBER**
No matter how many devices you need storage for, Avensys managed storage can help. There is no maximum or minimum number of devices we can store for you.
-  **ANY SIZE**
Avensys cater for all medical equipment, from thermometers to beds, there are no size limitations.
-  **RAPID RETURN**
Avensys guarantee your equipment will be returned to your facility within an agreed KPI (Typically 48Hrs), ensuring you have access to the equipment with minimum notice required.
-  **TRANSPORT**
Collection and delivery is undertaken by Avensys vehicle fleet. Courier delivery is also available on request.
-  **PATIENT READY**
Do you need the equipment 'Patient Ready' upon return? Avensys can commission all equipment to 'Patient Ready' status when delivered to site.
-  **TRANSPARENCY**
On delivery all equipment stored with Avensys is assetted and added to the Avensys Health-Information Management System, giving you the ability to monitor your equipment status.

THE MANAGED STORAGE PROCESS

Avensys' managed storage process is simple. Once you have confirmed the surplus equipment you need to store, simply contact Avensys.

Initial discussions confirm your storage requirements, paperwork is completed then Avensys will arrange collection of your equipment. The equipment is stored in a temperature and humidity controlled storage. Regular functionality tests are carried out whilst the equipment is in storage, to guarantee your equipment will be returned to your facility when you need it.

DID YOU KNOW....

The global COVID-19 outbreak saw the highest ever value of medical devices purchased over a 6 month period. During this period, the UK Government alone purchased 20,900 ventilators along with similar numbers of patient monitors, syringe drivers and patient warmers.

PRICE

The Avensys Managed Storage Solutions is affordable and cost-effective. In market comparisons, our customers have found our solutions to be inexpensive and financially worthwhile. Contact us for pricing or to discuss your storage requirements.

“ Avensys Managed Storage service arrived at just the right time. We had recently had eighteen beds and a similar number of anaesthetic machines arrive at our site as a result of the restructuring of a nearby hospital. While we did not need these items at the time we were aware that demand could increase overnight and they would need to be available at short notice. On-site storage brings its own issues, space and maintenance being prime amongst them.

Having been made aware of the Avensys offering, we made contact and within a week the beds, anaesthetic machines and a quantity of other devices that had been in storage have been relocated to Avensys storage.

We have worked with Avensys previously, and have no doubt that the devices will be returned to us ready for use as an when required. ”
